21
22 REASONS
23
24

25 Introduction and general factual background

26 *Introduction*

- 27 1. This a petition presented by Integra Group (which I shall refer to as “the
28 Company” or “Integra”) by which the Court is required to determine the fair
29 value of its Class A Common Shares in accordance with the provisions of section
30 238(11) of the Companies Law (2013 Revision). This is what might be described
31 as a “valuation action” or an “appraisal action”.

32 *The Company*

- 33 2. The Company was incorporated in the Cayman Islands on 15 March 2004 and
34 commenced business in the following year as an oil field services provider
35 operating in the Russian market. On 22 February 2007 Integra completed an
36 initial public offering of Regulation S Class A common shares Global

1 Depository Receipts (“GDRs”) listed on the London Stock Exchange (“LSE”).
2 Its market capitalization as at 31 December 2007 was US\$2.3 billion, based upon
3 EBITDA of US\$180 million. Integra’s initial business plan was to grow through
4 strategic acquisitions. By December 2009 it had completed 17 acquisitions
5 making it one of the leading companies in the oil field services and equipment
6 manufacturing sectors of the Russian market. However, from 2010 onwards
7 Integra began to dispose of some of its business segments. By the end of 2012,
8 following the spin-off of a joint venture business by means of an in specie
9 dividend, the Company was operating two reported business segments described
10 as (i) Drilling, Workover and Integrated Project Management and (ii)
11 Technology Services. As at 31 December 2012 the Company had a market
12 capitalization of US\$76 million based upon EBITDA of US\$33 million.

13 *The dissenting shareholders*

- 14 3. The respondents to the petition are three investment funds, namely East Capital
15 (Lux) Eastern European Fund, East Capital (Lux) Russian Fund and Salink
16 Limited (“the Respondents”). They are managed East Capital International AB
17 (“East Capital”) which is an experienced fund manager concentrating on public
18 and private securities in emerging and frontier markets, including Russia. As at
19 October 2014 it had approximately €2.9 billion under management. The
20 Respondents first invested in Integra in the initial public offering in 2007 and
21 held 17.3233% of its issued share capital as at the time of the merger.

22 *The merger transaction – a management buy-out*

- 23 4. In December 2013 the Company’s board of directors was informed of the
24 possibility that certain members of its management team (“the MBO
25 Participants”) were considering a proposal to purchase all of its shares not
26 already owned by them. The proposal was formally presented to the board of
27 directors at a meeting held in Rome on 9 and 10 December 2013, when the MBO
28 Participants expressed their intention to make an offer to purchase the
29 Company’s outstanding shares for US\$10 per share (equating to US\$20 per
30 GDR). The Board resolved to establish a committee of independent directors
31 having no financial interest in the transaction who were empowered to accept or
32 reject this offer. The Independent Committee comprised Mr Neil Gaskell who
33 had held senior management roles in Royal Dutch Shell Group, Mr Iosif
34 Bakaleynik who was formerly chief financial officer of TNK BP and Mr Dimitri
35 Avdeev who was a former finance director of Integra and had subsequently
36 become Vice President of Finance at Rosneft. On 2 February 2014 the
37 Independent Committee engaged Deutsche Bank AG to produce a “fairness
38 opinion” and Deutsche Bank subsequently opined that the offer price of US\$10
39

1 per share/US\$20 per GDR was fair. On 26 March 2014 an announcement was
2 made to the LSE that the Independent Committee had approved the MBO
3 Participants' offer. The publically listed price immediately before the
4 announcement was US\$15 per GDR (equivalent to US\$7.50 per share). The offer
5 price represented a premium of approximately 45% over the average market
6 price during the previous 30 days.

- 7 5. Commercially, this transaction is a management buy-out, but it was structured as
8 a statutory merger under Part XVI of the Companies Law between the Company
9 and a newly incorporated special purpose vehicle owned and controlled by the
10 MBO Participants ("the SPV"). Section 233(1) provides that two or more
11 companies limited by shares and incorporated under the Companies Law may
12 (subject to any express provisions to the contrary in any of their memoranda or
13 articles of association) merge or consolidate in accordance with the statutory
14 procedure. It is not necessary for present purposes to explain the statutory
15 procedure in detail. Suffice it to say that a plan of merger complying with the
16 statutory requirements was approved by a special resolution of the Company's
17 shareholders passed at an extraordinary general meeting held on 21 May 2014.
18 The merger was duly completed on 23 May 2014 and the Company's shares
19 were de-listed by the LSE on 28 May 2014.

20 ***The rights of dissenting shareholders - Section 238***

- 21 6. Dissenting shareholders are not required to accept a merger or consolidation
22 agreement which has been approved by the requisite majority. Instead, they are
23 entitled to dissent and demand payment for the fair value of their shares. Section
24 238(1) provides that:-

25 *A member of a constituent company incorporated under this Law shall be*
26 *entitled to payment of the fair value of his shares upon dissenting from a*
27 *merger or consolidation.*

28 Section 238(2) provides that a shareholder of a constituent company who intends
29 to dissent from a merger or consolidation must give written notice of objection to
30 his company *before* the vote is taken, stating his intention to demand payment for
31 his shares if the merger is authorized. The Respondents gave notice on 20 May
32 2014, the day before the EGM was held. If the merger or consolidation is
33 authorized, section 238(4) requires that the dissenting shareholder's company
34 must notify him of this fact within the next 20 days. Integra gave the
35 Respondents notice on 6 June 2014. By section 238(5), a dissenting shareholder
36 is then required, within 20 days of receiving that notice, to give his company a

1 written notice of his decision to dissent and a demand for payment of the fair
2 value of his shares. The Respondents gave notices of dissent (containing the
3 requisite information) on 26 June 2014. Section 238(8) then provides that either
4 the shareholder's company or the merged or consolidated company must make a
5 written offer to the shareholder to purchase his shares for a specified price which
6 it has determined to be the fair value (which could be more or less than the
7 merger consideration). On 2 July 2014 the Company offered to pay US\$10 per
8 share (being the same amount as the merger consideration). The legislation
9 contemplates that the parties will then negotiate and attempt to agree upon the
10 price to be paid. If no agreement is reached within a 30 day period, section
11 238(9) requires that the company must (and the dissenting shareholder may)
12 present a petition to the Court for a judicial determination of the fair value of the
13 shares. Whether or not any actual negotiation took place in this case has not been
14 disclosed to the Court. Suffice it to say that the Company's offer of US\$10 per
15 share was not accepted and its petition was duly presented on 20 August 2014.

- 16 7. The effect of having given notices of dissent under section 238(5) on 26 June
17 2014 is that the Respondents ceased to have any of the rights of shareholders
18 except the right to be paid the fair value of their shares and the corresponding
19 right to participate in the proceedings before the Court for the determination of
20 the fair value. They also had the right to commence proceedings to challenge the
21 validity of the transaction. Whilst East Capital has criticised certain of the steps
22 taken by Integra in connection with this transaction, the validity of the merger
23 has never been challenged. The Court is therefore required, in accordance with
24 section 238(11), to determine the fair value of the Respondents' shares and to
25 determine a fair rate of interest, if any, to be paid by the Company upon the
26 amount determined to be payable in respect of the shares.

27 **The evidence made available to the experts and put before the Court**

28 *The expert witnesses*

- 29 8. The principal evidence before the Court is that of the experts retained by the
30 parties. Integra retained Mr Andrew Robinson ("Mr Robinson"), who is a partner
31 of the United Kingdom firm of Deloitte LLP and leads its specialist valuation
32 group in London. The Respondents retained Mr John A. Taylor ("Mr Taylor")
33 who is the managing director of the Financial Advisory Services practice of
34 Houlihan Lokey Financial Advisors, Inc., based in Los Angeles. Both experts
35 were of course supported by a team of professionals whose own credentials were
36 explored in cross-examination of their principals. Mr Robinson and Mr Taylor
37 both have some 25 years' experience as commercial appraisers and both have

1 acted as expert witnesses on numerous occasions in various different
2 jurisdictions. They have impressive curricula vitae and their expertise is not in
3 question. Having listened to them giving oral evidence over a period of several
4 days, I formed the view that they are both very capable professionals but it was
5 apparent that Mr Taylor had taken a more hands on approach than Mr Robinson
6 and was more conversant with the details of the evidence relied upon in support
7 of his conclusions. I ultimately came to the conclusion that the valuation
8 approach and methodologies used by Mr Taylor are the most appropriate in the
9 circumstances of this case and should be adopted by the Court.

- 10
11 9. Mr Taylor opined that the fair value of the Company was US\$125 million as at
12 23 April 2014 and US\$130 million as at 21 May 2014. Following the exchange
13 of expert reports and discussion between the experts, Mr Taylor revised his
14 valuations upwards to US\$125 million and US\$135 million. Depending upon
15 how the number of shares in issue is calculated, his valuation of US\$135 million
16 translates to US\$15.04 per share or US\$13.36 per share.

- 17
18 10. Mr Robinson did not put a specific value on the Company. He opined that:

19
20 *Overall I am of the opinion that the fair value range for [Integra] at the*
21 *23 April 2014 is between US\$70 million and US\$100 million. I am of the*
22 *opinion that the value as at 21 May 2014 would have been slightly lower*
23 *than this given the worsening economic outlook for Russia and the*
24 *emerging Ukrainian situation.*

25
26 Again, depending on how the number of shares in issue is calculated, the low end
27 of the range translates into a price of US\$7.80 or US\$6.93 and the top end
28 translates to US\$11.14 or US\$9.89 per share. From the Court's point of view it is
29 not particularly helpful to be given a range of value in this way.

30
31 ***Establishment of an electronic data room***

- 32 11. It goes without saying that the information contained in Integra's own books and
33 records is highly relevant to any appraisal of its fair value as a going concern.
34 The Court's intention was that all the relevant material should be uploaded into
35 an electronic data room where it would be available for inspection by the experts
36 (and those instructing them) subject to giving appropriate confidentiality
37 undertakings. The experts are the best judge of what information is or is not
38 relevant for their purposes. It was the Court's intention, expressed in paragraph 7
39 of an order for directions made on 27 October 2014, that all documentary
40 information requested by either expert should be uploaded into the data room.
41 This did not happen. A great deal of material was uploaded, but Integra's

1 management took it upon themselves to control what information would be made
2 available to the experts and refused to upload some of the material requested by
3 Mr Taylor (or did so in a heavily redacted form) on the ground that they
4 considered it to be irrelevant. There is no means of knowing whether material
5 withheld by Integra's management might have affected the experts' judgments in
6 any way.

7
8 *The Moscow meetings*

- 9 12. The experts and their assistants attended a series of meetings with Integra's
10 senior management for the purpose of gaining a proper understanding of its
11 business and raising questions arising out of their review of the materials
12 uploaded into the electronic data room. These meetings took place at Integra's
13 head office in Moscow on 18 and 19 February 2015.

14
15 *Factual affidavit evidence*

- 16 13. In addition to the expert reports, each side filed affidavits. Mr Neil Gaskell swore
17 two affidavits on behalf of Integra. He had ceased to be a director of Integra
18 following completion of the merger, but he was retained as a consultant to assist
19 the MBO Participants with this proceeding. Subject to one paragraph in which he
20 commented in a very superficial way upon the directors' earlier attempt to
21 identify potential purchasers for some or all of Integra's business, Mr Gaskell's
22 affidavits set out the factual and procedural history in a non-controversial way.
23 Mr Magnus Lekander swore an affidavit on behalf of the Respondents. He is
24 East Capital's General counsel and his evidence essentially comprises a
25 complaint, made at an early stage of the proceedings, about the failure of
26 Integra's management to disclose material thought to be relevant to the valuation
27 exercise.

28
29 **The meaning of "fair value" in section 238 of the Companies Law**

- 30 14. Section 238(11) of the Companies Law (2013 Revision) provides that:-

31 *At the hearing of a petition, the Court shall determine the fair value of the*
32 *shares of such dissenting members as it finds are involved, together with a*
33 *fair rate of interest, if any, to be paid by the company upon the amount*
34 *determined to be fair value.*

- 35 15. This is the first time that the Court has been called upon to value a company's
36 shares in connection with a merger carried out in accordance with the provisions
37 of Part XVI of the Companies Law. Similar statutory remedies have existed in

1 the State of Delaware and in Canada for many years and both counsel have
2 referred me to decisions of the courts in those jurisdictions as a guide to the way
3 in which section 238 of the Cayman Islands legislation should be interpreted and
4 applied.

5 16. Mr Imrie referred me to an article published in the Canadian *Annual Review of*
6 *Civil Litigation* (2011) entitled *Fair Value – A Common Issue With Surprisingly*
7 *Sparse Canadian Authority* by Clarke Hunter QC and Clarissa Pearce which I
8 found to be helpful in a number of respects. On the question of what is meant by
9 “fair value” in the Canadian legislation¹, which is very similar to section 238, the
10 authors make the following general propositions as being well established by the
11 authorities –

- 12 1. *Valuation of shares pursuant to a legislative appraisal remedy is a*
13 *fact-based assessment, which requires "an important element of*
14 *judgment" by the court.*
- 15 2. *In exercising its judgment, "a court is advised to be prudent – to*
16 *proceed not on the basis of the most optimistic approach..."*
17 *Dissenting shareholders are not entitled to a better value than other*
18 *shareholder simply because they are dissenting. The appraisal remedy*
19 *is a "safeguard, not a bonus."*
- 20 3. *Neither party bears the burden of proving the fair value of the shares.*
21 *Although each party who asserts a proposition must prove it on the*
22 *balance of probabilities, by a preponderance of the evidence, it is the*
23 *court that must ultimately make the assessment of fair value. While*
24 *expert evidence is commonly put forward to assist in establishing fair*
25 *value, the court is not obliged to accept it.*
- 26 4. *Complicating the court's task is the frequently expressed admonition*
27 *that judges should exercise caution in attempting to mix and match*
28 *portions of competing expert reports and thereby cast themselves in*
29 *the role of performing their own valuation. As the trial judge put it in*
30 *the Brant Investments case:*²

31 *"In arriving at my valuation I do not propose to go through*
32 *the exercise followed by the experts, substituting my own*
33 *conclusions as to the basic ingredients for theirs. The wide*
34 *disparity exhibited by them in the application of their*
35 *technique does not inspire me with any confidence in the*

¹ See the Canada Business Corporations Act 1985, section 190.

² *Brant Investment Ltd et al v. KeepRite Inc et al* (1987) 60 OR (2d) 737, a decision of the Ontario High Court of Justice.

1 *result which I would achieve as an amateur in its*
2 *application."*

3 5. *Market value "is the highest price expressed in money obtainable in an*
4 *open and unrestricted market between knowledgeable, prudent, and*
5 *willing parties dealing at arm's length, who are fully informed and*
6 *under no compulsion to transact". However, "market value" is not*
7 *equivalent to "fair value", although, as will be seen, fair market value*
8 *can be an important part of the fair value determination depending on*
9 *the circumstances.*

10 6. *Fair value is a value that is "just and equitable" – one which provides*
11 *"adequate compensation (indemnity), consistent with the requirements*
12 *of justice and equity." One important implication of the distinction*
13 *between market and fair value is that, in general, no minority discount*
14 *can be applied in determining "fair value", a point discussed further*
15 *below.*

16 7. *Generally, neither the parties nor the court may rely on hindsight*
17 *evidence. Events that were not known as of the valuation date are not*
18 *relevant to determination of fair value on the valuation date.*
19 *However, while hindsight is generally excluded, there are some limited*
20 *but potentially significant exceptions to this principle.*

21 8. *The characteristics and motivations of the dissenting shareholder are*
22 *generally irrelevant to a fair value determination, even when the*
23 *dissenters are engaged in arbitrage.*

24 9. *The fair value offer which the corporation is required to make*
25 *pursuant to legislation does not constitute a "minimum" price. The*
26 *court may set a fair value that is lower than the price offered by the*
27 *corporation, and has done so in several cases.*

28
29 17. *The expert witnesses agreed that the definition of "fair value" promulgated in*
30 *International Valuation Standards (2013) published by the International*
31 *Valuation Standards Council³ is relevant and informative for the Court's*
32 *purpose. The chapter entitled IVS Framework states as follows –*

³ The International Valuation Standards Council is an independent, not-for-profit, private sector organization established in the United Kingdom, which has a remit to serve the public interest.

Fair value

38. 'Fair value' is the estimated price for the transfer of an asset or liability between identified knowledgeable and willing parties that reflects the respective interests of those parties.

39.

40. For purposes other than use in financial statements, 'fair value' can be distinguished from 'market value'. 'Fair value' requires the assessment of the price that is fair between two identified parties taking into account the respective advantages or disadvantages that each will gain from the transaction. It is commonly applied in judicial contexts. In contrast, 'market value' requires any advantages that would not be available to market participants generally to be disregarded.

41. 'Fair value' is a broader concept than 'market value'. Although in many cases the price which is fair between two parties will equate to that obtainable in the market, there will be cases where the assessment of 'fair' will involve taking into account matters that have to be disregarded in the assessment of 'market value', such as any element of 'special value' arising because of the combination of interests.

The experts are agreed about the way in which this definition of fair value is applied. The "identified parties" are Integra on one side and a market participant with an interest in buying the business on the other side. The reference to "market participants" means the whole body of individuals, companies or other entities that are involved in actual transactions or who are contemplating entering into a transaction

18. Mr Robinson also referred to the definition of "fair value" for financial reporting purposes, as stated in the *International Financial Reporting Standards* ("IFRS") which have been adopted by the International Accounting Standards Board. I have to say that I find this analogy unhelpful. As stated in the *IVS Framework* itself (at paragraph 39), the definition of "fair value" in IFRS is different from the IVS definition (stated above) and is generally consistent with the IVS definition of "market value". I accept Mr Taylor's evidence that the IFRS concept of fair value for financial reporting purposes is not relevant or informative for present purposes, in particular because it would imply a minority discount which I consider to be inappropriate, as do both parties in this case.

1 19. Given his professional background, Mr Taylor is of course very familiar with the
2 meaning of “fair value” in the context of statutory remedies under United States
3 laws, in particular section 262(h) of the Delaware General Corporation Law. He
4 summarised the comparable United States law in the following way (at
5 paragraph 110 of his Report) –
6

7 *Fair value has a number of various meanings within the variety of U.S.*
8 *courts, and is often referred to for valuations conducted in family law,*
9 *corporate dissolution and shareholder-initiated appraisal action disputes.*
10 *The basic concept of fair value is this context typically provides a minority*
11 *shareholder the economic benefit it would receive were the business sold*
12 *as a going concern in a hypothetical, arm’s length transaction at the*
13 *valuation date, with the resulting common shareholders’ equity value*
14 *distributed amongst common shareholders on a pari passu basis.*
15 *Accordingly, it is customary that these valuations are conducted without*
16 *incorporating minority, non-controlling or marketability and illiquidity*
17 *discounts into the analysis. Further, for illustrative purposes, in the*
18 *context of U.S. Delaware appraisal cases, it is my understanding that*
19 *§262(h) of the Delaware General Corporation Law requires the court to*
20 *“...determine the fair value of the shares, exclusive of any element of*
21 *value arising from the accomplishment or expectation of the merger ...”*
22 *In other words, the fair value analyses should reflect the “operative*
23 *reality” of the enterprise being examined without the expected impact or*
24 *structure of the merger.*

25 I accept this statement as a useful summary of the Delaware jurisprudence, which
26 I think can be relied upon as a helpful guide to the meaning of “fair value” in
27 section 238 of the Cayman Islands Companies Law.

28 20. Mr Imrie referred me to an article published in *The M&A Lawyer* (2014) entitled
29 *Dissenting Shareholders’ Appraisal Rights in Cayman Islands Mergers and*
30 *Consolidations* by Tony Heaven-Wren and Andrew Jackson. They make the
31 point that the drafting of what is now Part XVI of the Companies Law (2013
32 Revision) was heavily influenced by the Delaware and Canadian law and suggest
33 that, having regard to the principles established in those jurisdictions, this Court
34 should have little difficulty in accepting the following proposition –

35 *1. Fair value is the value to the shareholder of his proportionate share of*
36 *the business as a going concern, save where it is worth less on a net assets*
37 *(i.e. liquidated) basis as at the merger date: ex hypothesis the shareholder*
38 *has bought into the company as a going concern, not in anticipation of*

1 *participating in a liquidation, and it follows that, when he elects to dissent*
2 *from a merger or consolidation brought about at the behest of the*
3 *majority, he is thereafter deprived of his proportionate share of an active*
4 *enterprise and is entitled to be compensated for it. In determining the*
5 *measure of such compensation, the Court should be guided by the*
6 *following considerations:*

7
8 *1.1 Fair value does not include any premium for forcible taking*
9 *(ie. expropriation of the shares).*

10
11 *1.2 It is neither appropriate nor permissible to apply a minority*
12 *discount when making the determination.*

13
14 I agree with this proposition.

15
16 21. The Canadian courts have emphasised that every appraisal case turns on its own
17 facts and that there is the need to consider all the evidence that might be helpful
18 to the court. Lambert J.A., writing for the majority of the Court of Appeal of
19 British Columbia in *Cyprus Anvil Mining Corp v. Dickson* (1986) 8 B.C.L.R.
20 145, said –

21 *It is not necessary for me to analyse those cases or quote from them. The*
22 *point that they emphasise is that the problem of finding fair value of stock*
23 *is a special problem in every particular instance. It defies being reduced*
24 *to a set of rules for selecting a method of valuation, or to a formula or*
25 *equation which will produce an answer with the illusion of mathematical*
26 *certainty. Each case must be examined on its own facts, and each*
27 *presents its own difficulties. Factors which may be critically important*
28 *in one case may be meaningless in another. Calculations which may be*
29 *accurate guides for one stock may be entirely flawed when applied to*
30 *another stock.*

31
32 *The one true rule is to consider all the evidence that might be helpful,*
33 *and to consider the particular factors in the particular case, and to*
34 *exercise the best judgment that can be brought to bear on all the evidence*
35 *and all the factors. I emphasize: it is a question of judgment. No apology*
36 *need be offered for that. Parliament has decreed that fair value be*
37 *determined by the courts and not by a formula that can be stated in the*
38 *legislation.*

- 1 22. The Companies Law does not specify the date at which the determination of fair
2 value is to be made. The order for directions made on 27 October 2015 identified
3 two potential valuation dates, namely 23 April 2014 (which was the date upon
4 which the Circular containing the merger proposal was sent to shareholders and
5 published to the market) and 21 May 2014 (which was the date upon which the
6 EGM was held). Counsel ultimately agreed that the latter date should be adopted
7 and this is consistent with both the Delaware and Canadian law.
8
- 9 23. Under section 262(h) of the Delaware General Corporations Law dissenting
10 shareholders are entitled to receive their pro rata share of the common stock of
11 the company as it existed as of the merger date, exclusive of any element of
12 value arising from the accomplishment or expectation of the merger or
13 consolidation. This equates to the date of the EGM, namely 21 May 2014.
14
- 15 24. Under section 190(3) of the Alberta Companies Act dissenting shareholders are
16 entitled to be paid the fair value for their shares on the last business day before
17 the day on which the resolution from which the shareholder dissents was
18 adopted. This equates to the last date upon which the Respondents could have
19 served their notices of dissent, namely 20 May 2014.
20
- 21 25. The principle underlying the legislative approach in both these jurisdictions is
22 reflected in what was said by Anderson J. in *Re Brant Investments Ltd* (ibid) at
23 page 772 –
24

25 *The basic ground upon which the dissenting shareholders took their*
26 *position of dissent was objection to the impugned transaction. Because the*
27 *manner of carrying that transaction forward involves a fundamental*
28 *change within the meaning of the Act, they were accorded by the Act a*
29 *right of dissent and a right to be paid "fair value" of their shares. In my*
30 *view they should have no enhancement in the value of their investment*
31 *attributable to the transaction which gave rise to their dissent.*
32

33 I agree with this proposition and its converse, namely that the dissenting
34 shareholders should not bear any dilution or diminution in the value of their
35 investment resulting from the merger.
36

- 37 26. I agree with counsel that the date upon which merger decision is made, in this
38 case 21 May 2014, is the logical date at which to determine the fair value
39 payable to dissenting shareholders. This means that the fair value should be
40 determined at the point immediately before the merger is agreed, disregarding
41 the effects of the merger, whether it would have had a positive or negative effect

1 upon the Respondents had they continued to be shareholders of Integra. I use the
2 expression "the Valuation Date" to mean 21 May 2014.
3

4 27. In conclusion, the Court is therefore required to determine the fair value of
5 Integra's business as a going concern as at the Valuation Date, meaning at the
6 point immediately before the merger was approved. The fair value of
7 Respondents' shares is their proportionate share of this amount without any
8 minority discount or any premium for the forcible taking of their shares. There is
9 no presumption that the fair value offer made by Integra on 2 July 2014 in
10 accordance with section 238(8) constitutes a minimum price and it is open to the
11 Court to determine that the fair value is less than \$10 per share.
12

13 **The possible approaches to valuation and valuation methodologies**

14

15 ***Section 238***

16 28. Section 238 of the Companies Law (2013 Revision) does not dictate any
17 particular valuation methodology. It is well established in both the Canadian and
18 Delaware jurisprudence that fair value should be proved by any techniques or
19 methods which are generally considered acceptable in the financial community
20 and are otherwise admissible in court. (See the decision of the Delaware
21 Supreme Court in *Weinberger v. UOP Inc* (1983) 457 A.2d 701 at 713). It is
22 generally accepted, and agreed by the expert witnesses in this case, that there are
23 three main approaches to an appraisal exercise of the kind required to be
24 performed by the Court, each of which contains a number of specific valuation
25 methods.
26

27 ***The market approach***

28 29. The IVS Framework (paragraph 56) describes the *market approach* as providing
29 an indication of value by comparing the subject asset with identical or similar
30 assets for which price information is available. This approach encompasses a
31 number of possible methodologies, including a valuation based upon the trading
32 prices of a company's own shares and a valuation based upon the trading prices
33 of comparable companies operating in the same market sector.
34

35 30. Mr Taylor explains this approach in paragraphs 121 and 122 of his Report in the
36 following way:
37

38 *"The market approach provides value indications for a company through*
39 *a comparison of the company with guideline public companies or*
40 *guideline transactions. The market approach entails selecting relevant*

1 financial information of the subject company and capitalizing those
2 amounts using valuation multiples that are based on empirical market
3 observations.
4

5 A valuation multiple is an expression of what investors, in the aggregate,
6 believe to be a reasonable valuation for a particular security relative to a
7 measure of financial information, such as revenues, earnings or cash
8 flows. It incorporates expectations of growth and rests on the implicit
9 assumption that some level of economic earnings will be generated by the
10 enterprise into perpetuity. The most common means of obtaining valuation
11 multiples is through the guideline public company method, in which
12 market-derived measures of value for a set of guideline public companies
13 are compared with selected financial information for each of such
14 companies. This method yields valuation "multiples," which are generally
15 expressed as ratios of the various financial metrics. The multiples are then
16 used as data points for selecting multiples to be used for valuing the
17 subject company. Another common method of obtaining valuation
18 multiples, the guideline transaction method, involves comparing the
19 transaction values for a set of acquired companies to selected financial
20 metrics for each of such companies. The resulting transaction multiples
21 are then used as data points for selecting multiples to be used for valuing
22 the subject company. In both methods, one should choose guideline
23 companies that are similar to the subject company in economic and
24 operational areas that are of major importance to investors."
25

26 ***The income approach***

- 27 31. The IVS Framework (paragraph 58) describes the income approach as providing
28 an indication of value by converting cash flows to a single current capital value.
29 Each of these approaches to valuation encompasses different methodologies. The
30 income approach includes the *discounted cash flow method* (DCF) which Mr
31 Taylor describes as follows in paragraph 124 of his Report:
32

33 "The discounted cash flow method (DCF) estimates the present value of
34 the projected free cash flows to be generated by the subject company, and
35 theoretically available (though not necessarily paid) to its various capital
36 providers. The discount rate used in the DCF method is intended to reflect
37 all risks associated with realizing the stream of projected free cash flows.
38 It can also be interpreted as the rate of return that would be required by
39 providers of capital to a company to compensate them for the risk-
40 adjusted time value of their money. Unlike a valuation multiple, however,
41 the discount rate contains no implicit expectations of growth for the free

1 *cash flows. Instead, such growth expectations are contained within the*
2 *projected free cash flows.”*
3

4 ***The Cost (or asset based) approach***

- 5 32. For the sake of completeness, I should mention that the third possible valuation
6 approach would be the *cost approach* (or *asset-based approach*) which provides
7 an indication of value using the economic principle that a buyer will pay no more
8 for an asset than the cost to obtain an asset of equal utility, whether by cost or
9 construction. As Mr Taylor explains (in paragraph 127 of his Report) this
10 approach differs from the market and income approaches in two important ways.
11 It focuses on the value of the entity’s underlying assets and liabilities rather than
12 the economic earnings generated by the entity as a whole. It may also be applied
13 in situations where liquidation is a reasonable possibility. The experts agree that
14 a cost approach to valuation would not be appropriate in this case.
15

16 ***The Experts’ respective valuation approaches***

- 17 33. The experts do not agree upon the valuation methodologies which are most
18 appropriate for determining the fair value of Integra having regard to the factual
19 circumstances existing at the material time. Mr Robinson favours a market value
20 methodology based upon published stock market prices for Integra’s GDR’s
21 (which were listed on the LSE) as the prime indicator of fair value, to which a
22 control premium is then added. He relies upon a DCF valuation merely as a
23 means of cross-checking the reasonableness of his range of values derived from
24 his consideration of the listed GDR prices, control premium and the merger
25 consideration. Mr Taylor adopted the income approach and conducted a DCF
26 valuation. He also adopted the market approach and carried out a valuation using
27 the guideline public company methodology, which relies upon financial and
28 market information relating to publicly traded securities of comparable
29 companies engaged in the same industry. Mr. Taylor considered the DCF
30 methodology to be three times more reliable than the Guideline Public Company
31 methodology and so his concluded equity valuation is reached by applying a
32 75%/25% weighting to the results of the two methodologies.
33

- 34 34. In section 7 of his Report Mr. Robinson sought to place some reliance on the
35 proposition that “the Board had unsuccessfully attempted to sell the business”.
36 This conclusion was based entirely upon the following statement contained in
37 paragraph 41 of Mr Gaskell’s affidavit:
38

39 *“41 In this regard it should also be noted that prior to the merger*
40 *transaction, starting in mid 2011, the Board had attempted to*
41 *identify potential purchasers for some or all of the Petitioner and*

1 *had instructed MS in connection with this process. However, other*
2 *than an agreement with Geotech in November 2011 to merge the*
3 *Petitioner's seismic business with theirs, and notwithstanding*
4 *continuing efforts assisted by MS, no such party was found, and*
5 *indeed no formal or informal expression of interest was made*
6 *other than that which was eventually put forward by the*
7 *Participants. In light of the failure of this exercise and the absence*
8 *of any alternative offer following the announcement of the merger*
9 *proposal, I believe that the MBO Participants were the only*
10 *prospective purchaser of the Petitioner or any of its material*
11 *subsidiaries that existed in the marketplace."*
12

13 Mr Robinson said in evidence that he produced section 7 of his Report without
14 looking for any evidence to support Mr Gaskell's statement. As it turned out, a
15 review of the material put in the data room did not reveal any evidence that
16 would justify placing reliance upon the notion that an unsuccessful marketing
17 exercise had ever been undertaken. Mr. Taylor found no evidence that Integra
18 had instituted a "go-shop", undertaken any auction process or hired any
19 investment bank to identify potential purchasers or contact potential alternative
20 buyers as part of the MBO transaction.
21

22 35. Integra did engage Morgan Stanley in 2011. The engagement letter dated 9
23 September 2011 was eventually uploaded into the data room after the experts had
24 completed their joint report. It is perfectly clear from the terms of this letter that
25 Morgan Stanley was instructed in connection the potential sale, or some other
26 kind of strategic transaction, in respect of identified parts of Integra's business. It
27 was not instructed to find a buyer for the Company. In the event, Integra decided
28 not to upload into the data room any of the material which would enable the
29 experts to gain a proper understanding of the work actually undertaken by
30 Morgan Stanley and the results of that work.
31

32 36. I conclude that the points made by Mr Robinson in section 7 of his Report are
33 not justified by the available evidence.
34

35 **The Court's approach to the valuation of Integra**

36

37 37. For the reasons which I shall now explain, I have come to the conclusion that Mr
38 Taylor's valuation approach is the most appropriate in the circumstances of
39 Integra and that it should be adopted by the Court.

1 38. The mere fact that a company's shares are listed on a major stock exchange, in
2 this case the LSE, does not lead to the conclusion that a valuation methodology
3 based upon its publically traded prices is necessarily the most reliable approach
4 towards determining its fair value for the purposes of a section 238 court
5 appraisal. The case law and academic commentary to which I have been referred
6 suggests that this methodology is to be preferred in cases where there is a well
7 informed and liquid market with a large, widely held free float.
8

9 39. The Hunter and Pearce article (*ibid*) makes the following observation –
10

11 *The extent to which criticism of the [efficient market hypothesis] and stock*
12 *market valuation have merit is dependent upon the factual circumstances*
13 *in which the stock market valuation approach is applied. However, as the*
14 *trial judge in 'Deer Creek' ⁴ observed, the fact that markets are not*
15 *perfect is no reason to ignore them altogether. What can be said is that*
16 *stock market prices become more persuasive of fair value the more the*
17 *following things can be said:*
18

- 19 1. *the market is well informed about the company's assets, earnings*
20 *and future prospects;*
21 2. *the market for the company's stock is liquid, by which is meant*
22 *that at any time, someone wishing to buy or sell can readily find a*
23 *counterpart with the opposite objective;*
24 3. *the shares are widely held rather than dominated by a large*
25 *majority shareholder.*
26

27 40. Any tendency for the market to be uninformed or misinformed will diminish the
28 reliability of publically traded share prices as an indicator of a company's
29 (intrinsic) fair value. It is agreed that Integra always complied with its formal
30 reporting requirements. The experts are also agreed that the manner and extent to
31 which a listed company communicates with the market can affect its share price.
32 Mr Robinson concluded (in paragraphs 8.25-8.29 of his Report) that Integra's
33 management communicated regularly with the market, that it was under
34 sufficient scrutiny from market analysts and that lack of information was not a
35 factor affecting liquidity. Mr Taylor considered this issue in a more detailed and
36 nuanced way and I accept his conclusion that, during the most relevant period
37 from mid-2012 onwards, the market was less well informed about Integra
38 compared with CAT Oil AG ("CAT") and Eurasia Drilling Company ("EDC"),

⁴ *Deer Creek Energy Limited v. Paulson & Co.* (2008) ABQB 326, a decision of the Court of Queen's Bench of Alberta.

two companies which both experts have identified and used as comparable for various aspects of their valuation work.

41. The relative liquidity of Integra's GDRs has been measured by reference to four commonly used criteria, namely (a) the annual trading volume as a percentage of the 'free float', meaning the number or percentage of a company's shares not held by its management and insiders which are freely tradable on the public market (b) the number of days on which the GDRs were not traded in each year, (c) the median 'bid-ask spread' (meaning the difference between the bid and offered prices in trading on the LSE) over each year and (d) the dollar volume of daily trading.

42. The following table reflects the number of Integra's GDRs traded as a percentage of the free float had declined steadily relative to its peers and was significantly lower in the year before the MBO. There is some doubt about the amount of Integra's free float because it failed to disclose its share register and other relevant information. The MBO Participants held 32.5% of Integra's issued share capital as at the date of the announcement. This does not necessarily mean that the free float is 67.5% because registered shares or GDRs may have been held by members of management and/or other insiders who are not MBO Participants. There is some evidence tending to suggest that this may have been the case⁵, but the following table is based upon the assumption that the free float is 67.5% of the issued share capital.

Trading volume by year, as a percentage of free float			
Year	Integra	CAT	EDC
2007	180%	39%	37%
2008	162%	230%	148%
2009	178%	232%	93%
2010	98%	135%	193%
2011	106%	78%	264%
2012	64%	56%	95%
2013	16%	212%	106%
2014	9%	156%	100%

Source: Mr Robinson's Table 8.1

⁵ Integra's CFO sent Deutsche Bank an analysis of Integra's shareholding structure, as an attachment to an e-mail transmitted on 3 February 2014. This states that the 'JF Group' (a reference to John Fitzgibbons, one of the MBO Participants) held 19.14% and the 'Management Group' held 48.51% of an assumed number of 5,054,000 GDRs (which takes account of additional shares intended to issued or cash paid to directors and employees who held unvested units in a Restricted Stock Unit remuneration plan). In the absence of any explanation from Integra about the composition of these groups, the Respondents inevitably suspect that the free float may have been substantially lower than 67.5% during the most relevant period from 2012 onwards.

43. The following table reflects that the number of days on which Integra's GDRs were not traded increased very significantly from 2012 onwards. In that year it was not traded on 42 out of about 250 trading days (about 17%). In 2013 it rose to 112 (about 45%). During 2014 there was no trading on 52 out of about 100 trading days up to 26 May when its GDRs were de-listed. By this measure Integra's GDRs were very illiquid compared with its peers in the period of about two years leading up to the merger.

Days of No Trading			
Year	Integra	CAT	EDC
2007	1	0	0
2008	1	0	1
2009	7	0	37
2010	2	0	6
2011	2	0	0
2012	42	0	0
2013	112	0	0
2014 (Jan-May)	52	0	0
TOTAL	219	0	44

Source: Mr Robinson's Table 8.2

44. The following table reflects median bid-ask spreads calculated by Mr Taylor from data sourced from Bloomberg.⁶ I accept his conclusion that until 2011 Integra's median bid-ask spread is in line with the other two companies, but it widened significantly and became volatile starting in mid-2012 and then declined notably after the MBO announcement was made on 26 March 2014.

Median Bid-Ask Spread								
Company	2007	2008	2009	2010	2011	2012	2013	2014(1)
Integra	1.5%	1.1%	2.4%	1.3%	0.8%	3.2%	6.5%	7.3%
EDC	1.5%	2.0%	3.1%	0.7%	0.5%	0.3%	0.2%	0.4%
CAT Oil AG	1.5%	1.9%	2.0%	2.0%	1.9%	1.5%	1.3%	0.8%

Source: Mr Taylor's Appendix 10.2.3

⁶ There is an unexplained discrepancy between Mr Robinson's analysis based upon data sourced from Capital IQ and Mr. Taylor's analysis based on data sourced from Bloomberg. Since Capital IQ obtains its data from Bloomberg, I concluded that the Court should rely upon the Bloomberg sourced data.

45. This table reflects the median bid-ask spread expressed as a percentage of the price. Mr Robinson made the point that one should also consider the absolute amount of the spread as well as the percentage amount. In the 90 days prior to the MBO announcement Integra's average market price was US\$15.74 per GDR. During this period the median dollar amount of the bid-ask spread was around US\$1.15. The relatively high bid-ask spread is indicative of illiquidity.

46. The following table reflects the daily volume of trading of Integra's GDRs during the periods of 180 days, 90 days and 60 days prior to the MBO announcement. Even if the days on which Integra's GDRs were not traded at all are excluded from the analysis, the daily volume is significantly lower than that of its peers - \$59,000 compared with \$9.563 million for EDC and \$4.192 million for CAT over the 180 day period. If the days on which Integra's GDRs were not traded are included and counted as nil, the average trading volume for the 180 day period fall to just \$29,000.

Daily volume of trading

	Price			Average Amount of Daily Trading Volume (Including no trading days as \$nil)			Average Amount of Daily Trading Volume (Excluding no trading days)		
	Integra US\$ /GDR	EDC US\$/ GDR	CAT AG (Euro/ Share)	Integra (US\$ million)	EDC (US\$ million)	CAT (Euro million)	Integra (US\$ million)	EDC (US\$ million)	CAT (Euro million)
Closing Price before Announcement date: 3/25/2014	15.00	23.50	13.55	0.007	7.733	4.385	0.007	7.733	4.385
180-day Average	13.10	38.71	17.01	0.029	9.563	4.192	0.059	9.563	4.192
90-day Average	15.74	36.68	19.15	0.019	9.304	6.590	0.050	9.304	6.590
60-day Average	14.95	33.25	18.10	0.021	11.413	5.755	0.068	11.413	5.755

Source: Mr. Taylor's Appendix 10.1 (as corrected)

47. By each of these four criteria Integra's GDRs were an illiquid stock from 2012 onwards and the trend was towards increasing illiquidity during this period. Mr. Taylor regards this relative illiquidity as an important factor pointing to the conclusion that a market approach towards the determination of fair value may not be appropriate. In contrast, Mr Robinson's view is that, in spite of the relative illiquidity, a market approach to the determination of fair value is still appropriate because the market was not affected by what he calls "structural illiquidity" as the GDRs were listed on the LSE.

48. Mr Robinson uses the expression "structural illiquidity" to mean illiquidity caused by factors which affect the stock exchange or the particular market as a whole, rather than factors affecting individual securities listed on the exchange. He says that the reason for Integra's relative illiquidity in 2013 and 2014 was

1 that the market had lost patience with its inability to meet its earnings forecasts.
2 He said that "the key point here is that it had become less liquid because nobody
3 wanted to buy the shares and it was related to the performance rather than a
4 structural defect in the market". For this reason, he concludes that a market
5 approach to valuation is still appropriate. This does appear to be a novel concept
6 in that it is not supported by, or even referred to, in any of the jurisprudence and
7 academic literature to which I have been referred.
8

9 49. In answer to a question from the Court, Mr Robinson said this –
10

11 *"THE COURT: And for present purposes, what is the significance*
12 *of the fact that it was more liquid in the years prior to 2012?*
13

14 *THE WITNESS: That it is not structural reason why it became less*
15 *liquid, it was all to do with the market's perception of the company and its*
16 *performance and what its future expectations were. So the value of the*
17 *company had, I think, effectively declined. And that's what I'm trying to*
18 *point out, that nothing been changed that would say from a structural*
19 *perspective to say that this company should no longer be illiquid if it was*
20 *an attractive asset.*
21

22 *THE COURT: So are you saying that the shares of any company*
23 *which meets the criteria necessary to be listed on the London Stock*
24 *Exchange would not suffer from structural liquidity as you define it?*
25

26 *THE WITNESS: Yes, because you have to deal with – the London*
27 *Stock Exchange does not want structural problems when its market, it*
28 *wants to have its market and you end up delisting from London if you*
29 *can't perform."*
30

31 50. I am not able to accept Mr Robinson's analysis. He recognises that the market
32 price of a security listed on a major stock exchange such as the LSE may reflect
33 a minority discount, resulting in the need to apply a control premium in order to
34 arrive at a fair value, but he does not appear to recognise that it may also reflect
35 an illiquidity discount. He says (in paragraph 8.6 of his Report): "Ceteris paribus
36 therefore, investors will rationally pay more for an otherwise identical liquid
37 asset than for an illiquid asset." This must be right and I think that it leads to the
38 conclusion that the public traded price of a stock may reflect a liquidity discount
39 even though it is listed on a major exchange such as the LSE.
40

41 51. In this regard, I found the observations of Deutsche Bank's research analyst
42 published on the day after the MBO announcement to be instructive. Its company
43 alert document stated –

1 *The price offered does not look particularly great to us. The offer price is*
2 *a 33% premium to the market price as of the yesterday's closing. It is also*
3 *visibly higher than our estimated target price of USD16/GDR. Note that*
4 *we derive our fair value of Integra assuming a punitive ROE of 17% to*
5 *reflect the stock's poor liquidity. Should we assume no special liquidity*
6 *discount (a 'regular' liquidity risk premium of 2pp rather than 4pp that we*
7 *currently use in Integra), our target price would be USD24/GDR. Hence,*
8 *the proposed price does not look great to us.*
9

10 52. Deutsche Bank's approach recognises the need to compensate for the illiquidity
11 discount reflected in the traded price of Integra's GDRs in order to arrive at a fair
12 value. Mr Robinson does not recognise that the traded price might reflect any
13 illiquidity discount because Integra's GDRs are listed on the LSE and therefore
14 do not suffer from any 'structural illiquidity'. Deutsche Bank's approach was put
15 to Mr Robinson in cross-examination. His response was unconvincing and
16 certainly did not lead me to conclude that, in the absence of 'structural
17 illiquidity' (as defined by him), a market approach to the valuation of Integra's
18 GDRs based upon its own traded prices should be preferred to a methodology
19 based upon traded prices of comparable stocks or an income approach based
20 upon a DCF calculation or a combination of both. I prefer the more conventional
21 approach which is that illiquidity of the kind identified in this case is an
22 important factor which may lead to the conclusion that the publically traded price
23 is not a reliable indicator of fair value or not sufficiently reliable to exclude some
24 alternative valuation approach or methodology.
25

26 53. For these reasons I have come to the overall conclusion that the Court's
27 valuation of Integra should be done in the way recommended by Mr Taylor. He
28 combined an income approach using a DCF methodology with a market
29 approach, using a guideline public company methodology. He places greater
30 weight on the DCF methodology (giving it a 75% weighting) than the guideline
31 public company methodology (giving it a 25% weighting). I turn next to consider
32 various specific criticisms about the way in which he applied these
33 methodologies.
34

35 **Criticisms made of Mr Taylor's valuation methodologies**

36

37 54. Mr Robinson rightly makes the point that the level of confidence that can be
38 placed in any DCF valuation depends upon the reliability of underlying cash
39 flow models. His review of the forecasts published to the market in the years

1 2011-2013 by the Company itself and by various independent analysts⁷ suggests
2 that both Integra's management and the analysts have been repeatedly over-
3 optimistic about the Company's anticipated performance, although Mr Taylor
4 makes the point that the estimated revenue growth forecast by Integra's
5 management is low relative to the oilfield service sector generally. Mr Robinson
6 also cautions that that a majority of the value derives from cash flows in the later
7 years of the projection period (through to 2018) and that the earnings forecasts
8 are dependent upon Integra having made a substantial capital investment in new
9 drilling rigs (budgeted at US\$328 million over the period). The fact that a high
10 proportion of the value reflected in the experts' DCF calculations is derived from
11 the terminal value calculation means that the resulting value is very sensitive to
12 small assumption changes. For these reasons it is particularly important that the
13 cash flow projections/models are subjected to an in depth review and analysis.
14

15 55. In the period from 6 December 2013 to 21 February 2014 Integra's management
16 prepared and revised multiple cash flow models for the purposes of the merger
17 transaction. Mr Robinson's Report identifies nine separate models produced in
18 this period.⁸ Mr Taylor's Report explains how the model relied upon by
19 Deutsche Bank for the purposes of its fairness opinion (which I shall referred to
20 as "the MBO Projection Model") went through at least eleven revisions by
21 management during the period of about 10 weeks before finally being approved
22 by the Independent Committee on 21 February 2014.⁹ Mr Taylor conducted an in
23 depth analysis of these models which were found to have been generated in
24 various different ways, with significantly different levels of detail. In particular,
25 he noted that many of the Excel spread sheets contained "hard coded" numbers
26 inserted by management rather than values generated from the use of clearly
27 identified working formulae. In spite of these difficulties and a certain reluctance
28 on the part of Integra's CFO to explain the methodologies used by her staff, Mr
29 Taylor concluded he had been able to gain a sufficient understanding of the way
30 in which the MBO Projection Model had been generated, such that it could be
31 relied upon for the purposes of a DCF valuation, subject to certain adjustments.
32 Mr Robinson did not devote a similar effort to analysing the models which is
33 understandable bearing in mind that he decided to use his DCF calculation
34 merely for the purpose of cross-checking the valuation produced by a market

⁷ Integra was covered by Deutsche Bank, Morgan Stanley, Renaissance Capital., URALSIB and, VTB Capital in the period from 2012 onwards.

⁸ Mr Robinson's Report (paragraphs 9.1 to 9.9) identifies nine separate models produced in this period. The first is the long term model dated 6 December 2013 was approved by the board of directors at a meeting on 9 December 2013. The last is the model approved by the Independent Committee and sent to Deutsche Bank on 21 February 2014 and is referred to as "the Business Plan" in its fairness opinion. I have referred to it as "the MBO Projection Model".

⁹ Mr Taylor's Report, paragraph 75 and Figure 4.

1 methodology. Nevertheless, he concluded that the MBO Projection Model
2 presents a “reasonable starting point for a DCF valuation”. .
3

4 56. Integra’s share capital is denominated in US\$, but its functional currency is the
5 Russian rouble. For this reason management’s various cash flow projections
6 have been generated in roubles and then translated into dollars, for which
7 purpose a flat exchange rate has been used. In preparing its DCF valuation,
8 Deutsche Bank used a forward curve exchange rate which forecast that the
9 rouble would fall against the dollar over the applicable period, thus resulting in a
10 lower valuation. Mr Taylor used the flat exchange rate reflected in the MBO
11 Projection Model. Mr Robinson carried out DCF calculations using both the flat
12 exchange rate and the forward curve forecast, without expressing any preference.
13 I have adopted Mr Taylor’s DCF calculations using the flat exchange rate.
14

15 57. Mr Robinson does not agree with the way in which Mr Taylor dealt with the
16 working capital requirement in his DCF calculation. They agree that Integra had
17 a working capital deficit of about US\$1 million as at 31 December 2013. The
18 working capital requirement over the period ended 2018 was determined to be
19 about US\$47.7 million by Deutsche Bank based upon the MBO Projection
20 Model. Mr Robinson and Mr Taylor projected about US\$41 million and US\$40
21 million respectively based upon different methodologies. The relevant issue
22 debated by the experts is whether Mr Taylor ought to have made a deduction
23 from his concluded equity value to reflect the working capital deficit. Mr
24 Taylor’s methodology relies upon market based working capital assumptions and
25 so his selected multiples already reflect the relative risk of Integra’s working
26 capital position as at the Valuation Date. I accept Mr Taylor’s judgement that,
27 for this reason, no adjustment should be made because it would result in a form
28 of “double counting.”
29

30 58. The second issue relates to the amount of the deferred tax asset which ought
31 properly to be included in the model used for any DCF calculation. The Integra
32 Group’s audited consolidated financial statements for the year ended 31
33 December 2013 reflect a net deferred income tax asset of US\$22.447 million
34 (2012: US\$20.412 million). Note 16 states as follows: “Deferred income tax
35 assets associated with tax losses available for carry-forward are recognised when
36 management believes it is probable that the Group will be able to apply the
37 losses to offset future tax profits”. The Note explains how the deferred tax assets
38 (liabilities) of individual group companies have been consolidated and identifies
39 the extent to which Integra’s management decided to impair certain tax assets on
40 the basis that it did not believe that such tax losses can be used to reduce taxes on
41 income in the foreseeable future. In other words, Integra’s management made a

1 judgement about the extent to which the gross deferred tax assets should be
2 impaired. These audited financial statements were issued on 16 April 2014. It
3 follows that Integra's management must have been providing financial
4 information simultaneously to Ernst & Young¹⁰ (for purposes of the audit) and to
5 Deutsche Bank (for purposes of the fairness opinion). However, the gross
6 deferred tax asset reflected in the MBO Projection Model prepared for Deutsche
7 Bank is significantly lower than the corresponding amount in the audited
8 financial statements. Mr Taylor sought an explanation for this discrepancy at the
9 Moscow meetings. He was told that a dispute had arisen with the Russian tax
10 authority which is challenging the utilisation of approximately US\$36.7 million
11 of the losses but Integra did not explain to Mr Taylor, and has not explained to
12 the Court, how its management felt able to make materially different
13 representations to Ernst & Young and to Deutsche Bank about the extent to
14 which it believed that the gross deferred tax assets should be impaired. It seems
15 to me that Mr Taylor was right to place reliance upon the published statement of
16 management's belief reflected in the audited financial statements.

17
18 59. The third adjustment to MBO Projection Model made by Mr Taylor also
19 concerns tax. Integra's audited consolidated financial statements reflect that it
20 has incurred non-tax deductible expenses in 2013 and in the prior year. Integra
21 does not qualify as a 'consolidated group taxpayer' under the applicable Russian
22 law with the result that expenses incurred in one group company (whether it be
23 the parent company or a subsidiary) cannot be set off against income generated
24 in another group company for income tax purposes. The effect of this rule is
25 reflected in Note 16 of Integra's audited consolidated financial statements. At the
26 Moscow meetings Mr Taylor was told that the non-tax deductible expenses in
27 fact comprise overhead expenses incurred at the parent company level. I assume
28 this answer must relate to both historic expenses reflected in the financial
29 statements and projected expenses reflected in the MBO Projection Model. Mr
30 Taylor's research led him to the conclusion that it would be possible for such
31 expenses to be charged to operating subsidiaries in a way which would enable it
32 to be treated as a deductible expense, provided that a bona fide framework of
33 service agreements is established pursuant to which services are actually
34 provided on the basis of arm's length pricing.

35
36 60. Even if Mr Taylor's understanding of the applicable Russian tax law is right, it
37 seems to me that he had insufficient evidence (and the Court still has insufficient
38 evidence) to justify adjusting the MBO Projection Model to assume that these
39 expenses will be tax deductible going forward. Integra did in fact incur non-tax

¹⁰ The auditor is the Russian firm of Ernst & Young (CIS) B.V., based in Moscow.

1 deductible expenses in 2012 and 2013. Why this occurred is unclear. There was
2 no in-depth discussion of the issue at the Moscow meetings. If Integra's
3 management had considered the issue with its auditors and tax advisers at any
4 stage in the past, the relevant material has not been disclosed. All that can be said
5 is that Integra's management and the Independent Committee believe that the
6 Company will continue to incur non-tax deductible expenses. There is no
7 sufficient evidential basis for concluding that their judgment is likely to be
8 wrong and that tax relief is likely to be available going forward. For these
9 reasons I have adjusted Mr Taylor's valuation to reflect that Integra will continue
10 to incur non-tax deductible expenses.

11
12 61. After having produced his report, Mr Taylor gave further consideration to the
13 question of the cost savings resulting from "going private". In a case such as the
14 present, where a company is taken private by means of a management buy-out,
15 there is an argument for saying that the anticipated cost saving inherent in de-
16 listing its shares should be reflected in the fair value attributable to the minority
17 who are squeezed out by operation of the statutory provisions. This is an
18 exception to the general principle reflected in the Canadian jurisprudence that
19 synergies resulting from mergers (in the economic sense of combining two
20 existing businesses) should be excluded from the fair value of the dissenters'
21 interest. (*Brant Investments* (ibid) per Romaine J at pages 772-3). The MBO
22 Projection Model includes the cost savings of going private but it has then been
23 eliminated by adding back unidentified expenses of equal amount for which
24 there is no explanation in the model itself. During the Moscow meetings the
25 experts were told by the CFO that the cost saving of going private was expected
26 to be between US\$0.5 million and US\$1.0 million. However, the experts were
27 also told that Integra was expecting to incur extra expense for some additional
28 services but these have not been identified. In the absence of any explanation
29 about how this extra expense would arise, Mr Taylor decided to adjust the MBO
30 Projection Model to reflect US\$0.75 million per annum as the cost saving of
31 going private. This adjustment would result in an increase of US\$4,058 million
32 in his concluded equity value.

33
34 62. However, I have come to the conclusion that this adjustment should not be made.
35 The cost saving of going private is an inherent result of the transaction from
36 which the Respondents have dissented. In my view dissenting shareholders
37 should not benefit from any enhancement in the value of their shareholding
38 attributable directly to the transaction from which they have dissented.

39
40 63. As I have already said, Mr Taylor also adopted a market approach using a
41 guideline public company methodology, the details of which are fully explained

1 in his Report. He identified three categories of comparable companies engaged in
2 the oil field services industry for the purpose of developing appropriate
3 multiples, namely Russian companies, large international diversified companies
4 and a group of smaller companies. The process by which he formulated his final
5 list of guideline public companies is set out in his report and was carefully
6 explained in re-examination. All the large international diversified companies
7 and three of the Russian companies were eliminated, including Integra itself.¹¹
8 The guideline public companies used in the multiples analysis therefore
9 comprised CAT and EDC and five other 'other international diversified oil field
10 services companies'.

11
12 64. Counsel for Integra criticised the selection of guideline companies; the way in
13 which Mr Taylor distilled multiplies from the market data; and the way in which
14 he determined the control premium which is necessary to convert the publically
15 traded price (which reflects the value of a minority interest) to a fair value
16 (which reflects the intrinsic value without any minority discount). It seems to me
17 that counsel's broad brush criticism of the Mr Taylor's guideline public company
18 methodology was superficial and not actually supported by any evidence given
19 by Mr Robinson. Mr Taylor explained his methodology in re-examination at
20 length a way which I found persuasive and I am satisfied that his conclusions can
21 be relied upon by the Court.

22
23 65. Mr Robinson identified certain adjustments required to EBITDA for the years
24 2012 and 2013 which is relevant to Mr Taylor's judgment about the multiples to
25 be used. This was one of the points discussed by the experts following exchange
26 of their reports. The result of making this adjustment is to increase Mr Taylor's
27 concluded equity value of the Integra by US\$3,045 million. There appears to be
28 no good reason for rejecting this adjustment.

29
30 66. I have come to the conclusion that I should adopt Mr Taylor's valuation
31 approach and methodologies and that his judgment can be relied upon by the
32 Court. However, for the reasons which I have explained, I shall adopt his
33 concluded equity value subject to two adjustments in respect of tax and the cost
34 savings of going private. I conclude that the fair value of Integra as at the
35 Valuation Date was US\$105 million. The following table reflects Mr Taylor's
36 work and explains how I have adjusted his conclusions to arrive at the Court's
37 valuation (rounded up to the nearest million).

¹¹ The five Russian publically traded oil field service companies identified by Mr Taylor are C.A.T. Oil AG, Eurasia Drilling Company, HMS Hydraulic Machines & Systems Plc, IG Seismic Services Plc and Integra itself.

US\$000s	5% TGR 15.625% DR	7.5% TGR 15.625% DR	Concluded DCF Valuation	Guideline Public Company Valuation	Concluded Equity Value

Calculation of the fair value of the Respondents' shares

67. The fair value of the Respondents' shares as at the Valuation Date is their proportionate share of US\$105 million without any minority discount or premium for forcible taking. There is a dispute between the parties about the way in which their proportionate share should be calculated.

68. Integra failed to disclose its share register, but the Offering Circular states that the "The Company expects that, on the Voting Record Date, 8,973,473 Shares¹² would be issued and outstanding." At the 2:1 ratio, this equates to 4,486,736.5 GDRs. It is not in dispute that the Respondents collectively owned 1,554,520 shares on the Valuation Date as stated in paragraph 12 of the Petition. It follows that the Respondents owned 17.3233% of Integra's issued share capital as at the Valuation Date. The Respondents argue that I should calculate the fair value of their shares as follows :

Value per share: $\text{US\$105,000,000} \div 8,973,473 \text{ shares} = \11.70 per share (rounded to the nearest cent).

Amount due to Respondents: $1,554,520 \text{ shares} \times \$11.70 = \$18,187,884$

Alternatively: $\text{US\$105,000,000} \times 17.3233\% = \text{US\$18,189,465}$

¹² This is more than the 8,946,531 shares (equivalent to 4,473,265.5 GDRs) issued and outstanding as at 31 December 2013, as reflected in the Company's audited consolidated financial statements.

69. This analysis does not take account of the fact that unvested units awarded by way of deferred remuneration to certain of Integra's directors and employees under its Restricted Stock Unit Plan vested pursuant to Clause 5.4 of the Merger Implementation Agreement, which provides as follows –

(a) Prior to the Implementation Date,¹³ the Integra Board will resolve that, subject only to the Merger being consummated on the Implementation Date, the RSUs under the RSU Plan shall vest immediately on the Implementation Date.

(b) Within 10 Business Days of the Implementation Date:

(i) Integra Shares shall be issued by Integra to RSU Participants who are MBO Participants in accordance with the terms of the RSU Plan held;

(ii) USD \$10 shall be paid by Integra to each RSU Participant who is not an MBO Participant instead of each Integra Share to which that RSU Participant would otherwise be entitled in accordance with the terms of the RSU Plan.

The number of unvested RSU's is not stated in Part 11 of the Circular and there is no affidavit evidence before the Court addressing this issue. The resolution passed by the Integra Board is not in evidence. Therefore, the Court has no direct evidence about the number of new shares issued to MBO Participants and the amount of money paid to other RSU Participants. However, counsel for Integra submits that I can infer from the material given to Deutsche Bank for the purposes of preparing its fairness opinion that the effect of vesting all the outstanding the RSUs is to dilute the Respondents' proportionate interest from 17.3233% as at the Valuation Date to 15.3801% as at the Implementation Date.¹⁴ Counsel for Integra argues (in effect) that I should calculate the fair value of the Respondents' shares as follows:

Value per share: $\text{US\$}105,000,000 \div 10,107,344 \text{ shares} = \10.39 per share (rounded to the nearest cent).

Amount due to Respondents: $1,554,520 \text{ shares} \times \$10.39 = \$16,151,462$.

Alternatively: $\text{US\$}105,000,000 \times 15.3801\% = \$16,149,105$.

¹³ The Implementation Date was 23 May 2014.

¹⁴ Counsel's submission referred me to the information given to Deutsche Bank described in Footnote [6] above, from which I think that it is possible to infer that Integra's CFO anticipated that the RSU Participants' total entitlement under Clause 5.4 would be 1,113,871 shares. On this basis the total number of shares (hypothetically) in issue on the Implementation Date would be 10,107,344 shares (disregarding the fact that the Respondents' shares would have been cancelled and the fact that some RSU Participants are entitled to receive cash, not shares). It follows that the Respondents' (hypothetical) proportionate interest would have been 15.3801%.

1 70. For the reason which I have explained in paragraph 61 above, my view is that
2 counsel's submission leads to a result which is wrong in principle and should be
3 rejected. The Respondents have a statutory right to dissent from the merger
4 transaction, as a result of which they cease to have the rights of shareholders and
5 are instead entitled to receive the fair value of their shareholdings. They should
6 not be afforded the benefits of the transaction from which they have dissented.
7 Nor should the burdens of the transaction be imposed upon them. In *Brant*
8 *Investments* (ibid) Romaine J. said (at page 772) –
9

10 *The basic ground upon which the dissenting shareholders took their position of*
11 *dissent was objection to the impugned transaction. Because the manner of*
12 *carrying that transaction forward involves a fundamental change within the*
13 *meaning of the Act, they were accorded by the Act a right of dissent and a right*
14 *to be paid "fair value" of their shares. In my view they should have no*
15 *enhancement in the value of their investment attributable to the transaction*
16 *which gave rise to their dissent.*
17

18 I agree with this statement of principle. Its converse is that the dissenting
19 shareholders should not bear any diminution in the value of their investment
20 directly attributable to the transaction from which they were entitled to dissent.
21 As at the Valuation Date they owned 17.3233% of the issued share capital. As a
22 result of the merger transaction being approved and implemented new shares
23 were issued on the Implementation Date with the result that, if the Respondents
24 had still been shareholders, they would have owned only 15.3801% of the
25 Company. In my view, they are entitled to their proportionate share as it existed
26 on the Valuation Date. They should not suffer any diminution of value
27 attributable direct to the transaction from which they dissented. If my approach
28 were held to be wrong, I would include the cost savings of going private into the
29 DCF calculation, thus increasing the equity value by US\$4,058 million.
30

31 71. For these reasons I adopt the Respondents' method of calculating the amounts
32 due to them.
33

34 **The fair rate of interest** 35

36 72. By section 238(11) of the Companies Law, the Court is required to determine the
37 fair value "together with a fair rate of interest, if any, to be paid by the company
38 upon the amount determined to be the fair value." This formulation appears to
39 have been reproduced from an earlier version of section 262(h) of the Delaware
40 General Corporations Law which provided that "the Court shall appraise the
41 shares... together with a fair rate of interest, if any, to be paid upon the amount

1 determined to be the fair value.” The Delaware courts interpreted this provision
2 in a way which involves balancing the rate which the surviving corporation
3 would have had to pay to borrow funds and the rate which a prudent investor
4 could have earned on cash or cash equivalents during the relevant period. The
5 ‘legal rate’ payable on judgment debts was treated as a useful default rate in
6 cases where the parties failed to adduce any relevant evidence. (*Cede & Co., Inc*
7 *v. Medpoint Healthcare, Inc* 2004 Del. Ch, Lexis 124 at page 21.).
8

9 73. The ‘legal rate’ under Delaware law is the equivalent of the ‘prescribed rates’
10 payable on judgment debts under the Judgment Debts (Rates of Interest) Rules in
11 the sense that it is the statutory rate payable on judgment debts, but I have no
12 evidence about the way in which the Delaware rate is fixed. The prescribed rates
13 applicable in this jurisdiction are fixed from time to time by the Rules
14 Committee for a basket of different currencies using the following formula: 3-
15 month LIBOR (or equivalent) rounded to the nearest one eighth per cent plus
16 two percentage points or increased by 125%, whichever is the greater. The
17 prescribed rate for US\$ has been fixed at 2.375% since 1 February 2013.
18

19 74. It can be said that the Respondents have been kept out of their money since 2
20 July 2014, the date on which Integra made its written offer to pay fair value of
21 US\$10 per share pursuant to section 238(8). For whatever reason, it did not offer
22 to pay this amount (or any lesser amount) on account pending the outcome of the
23 proceedings. It follows that Integra has had the use of the Respondents’ money
24 for more than a year.
25

26 75. Integra’s audited consolidated financial statements reflect that it has Russian
27 rouble denominated loan liabilities and US dollar denominated cash reserves.
28 Note 17 reflects that its cost of borrowing was 10.7% in 2013 and 11.0% in 2012
29 (being the weighted average fixed and floating rates in respect Russian rouble
30 denominated borrowings due after more than one year). The Circular stated that
31 the merger consideration would be financed by approximately US\$34 million of
32 cash held by Integra and the balance from a US\$30 million Facility Agreement
33 dated 22 April 2014 and made between OAO “Alfa-Bank” and Foreston
34 Holdings Limited which is a party to the Merger Implementation Agreement.
35 The rate of interest payable under this facility is 9.7% per annum.
36

37 76. The Respondents have not adduced any evidence about the effective rate of
38 interest which they actually earned or which a prudent investor could reasonably
39 have expected to earn on cash or cash equivalents during the relevant period.
40 Integra’s audited consolidated financial statements reflect that it had the
41 equivalent of US\$59,468,000 in cash and cash equivalents as at 31 December

2013 but the notes do not disclose the results of its cash management operations. Integra's counsel's written closing submission says that "The appropriate rate is 0.163% per annum being that which has actually been earned by Integra on the monies during the course of the proceedings" but there is no affidavit evidence explaining this assertion. The written submission contains a footnote which refers to a document reflecting that Integra had an average cash balance of US\$20,004,906.02 during a 316 day period from 23 June 2014 to 5 May 2015 on which it earned US\$36,547.32, which implies an effective annual rate of interest marginally in excess of 0.2%. The document also states the "Effective interest rate – 0.158%" but I cannot reconcile this rate with the stated interest income. In the absence of any affidavit evidence about the way in which Integra has actually been managing its treasury operation during the period since the merger, I think that it is reasonable to assume that it was generating around 0.2% per annum.

77. Counsel for the Respondents submits that the Court should adopt a mid-rate between the prescribed rate for US\$ (2.375%) and Integra's assumed US\$ borrowing rate (9.7%), which would be 6.0375% per annum. There is no obvious logic to this submission. The prescribed rate does not reflect the rate which a judgment creditor can expect to earn on cash deposits. The mid-rate between Integra's assumed return on cash (0.2%) and Integra's assumed US\$ borrowing rate (9.7%) is 4.95% per annum. I conclude that this is a "fair rate of interest" which should be awarded to the Respondents from 2 July 2014 until payment.

Conclusion

78. In conclusion, I declare that the fair value of the Respondents' shares and the fair rate of interest payable on the fair value is as follows:-

East Capital (Lux) Russia Fund

730,238 shares at \$11.70 per share = US\$8,543,784.60

Interest for 422 days at \$1158.67 per day = US\$ 488,961.98

Total **US\$9,032,746.58**

East Capital (Lux) Eastern European Fund

193,414 shares at \$11.70 per share = US\$2,262,943.80

Interest for 422 days at \$306.89 per day = US\$ 129,508.59

Total **US\$2,392,452.39**

Salink Limited

630,868 shares at \$11.70 per share = US\$7,381,155.60

Interest for 422 days at \$1001.06 per day = US\$ 422,424.57

Total **US\$7,803,580.17**

Costs of the proceeding

79. Section 238(14) provides that:

The costs of the proceeding may be determined by the Court and taxed upon the parties as the Court deems equitable in the circumstances;...

It was agreed between counsel that costs should be reserved pending the exchange of written submissions.

DATED the 28th day of August 2015

The Hon. Justice Andrew J. Jones, QC
JUDGE OF THE GRAND COURT
